Title (Units):COMP2007 Object Oriented Programming (3,3,2)

Course Aims:	To study the object-oriented programming principles and techniques. Upon completion, students should be able to use an object-oriented language to develop computer programs for problem solving.
	computer programs for problem sorving.

Prerequisite: COMP 1005 Essence of Computing

Course Intended Learning Outcomes (CILOs):

Upon successful completion of this course, students should be able to:

No.	Course Intended Learning Outcomes (CILOs)		
	Knowledge		
1	Describe the elements and principles of object-oriented programming		
2	Apply the object-oriented concepts to software design		
3	Describe the importance of programming styles, implementation and testing		
	Professional Skill		
4	Design and develop object-oriented computer programs		
5	Formulate problems as steps so as to be solved systematically		
	Attitude		
6	Integrate robustness, reusability, and portability into software development		

Calendar Description:

This course introduces the object-oriented programming concepts, principles, and techniques, including classes, objects, inheritance, and polymorphism. All these concepts are illustrated via a contemporary object-oriented programming language.

Teaching and Learning Activities (TLAs):

CILOs	Type of TLA
1, 3, 5	Students will learn the elements of an object-oriented programming language and the
	object-oriented principles via lectures and tutorials.
1-6	Tutorials and machine problems are designed for students to incorporate object-oriented
	techniques into their programs.

Assessment:

No.	Assessment	Weighting	CILOs to be	Description of Assessment Tasks
	Methods		addressed	
1	Continuous Assessment	40%	2-6	Continuous assessments are designed to measure how well the students have learned the fundamentals and major concepts of object-oriented programming. A number of machine problems will be given to students to train them to design programs via the object-oriented approach. Practical tests will be used to test their programming capabilities.
2	Examination	60%	1-6	Final examination questions are designed to see how far students have achieved their intended learning outcomes. Questions will primarily be concepts and skills based to assess the student's ability in object-oriented programming.

Assessment Rubrics:

	Excellent (A)	Good (B)	Satisfactory (C)	Marginal Pass (D)	Fail (F)
Principles of object-oriented programming	principles of object-oriented languages, namely, data encapsulation, inheritance, and polymorphism.	sufficient	The student acquires average knowledge in the principles of object-oriented languages, namely, data encapsulation, inheritance, and polymorphism.	The student is able to describe the meanings of data encapsulation, inheritance, and polymorphism, and to give simple examples on them.	The student is unable to describe the meanings of data encapsulation, inheritance, and polymorphism, and to give simple examples on them.
Applying object- oriented techniques to software packages	extensively apply object-oriented techniques to write software applications with multiple classes, e.g., enforcing data hiding as	The student is able to sufficiently apply object-oriented techniques to write software applications with multiple classes, e.g., enforcing data hiding via class privacy.	The student is able to apply object-oriented techniques in some key elements of software applications with multiple classes, e.g., enforcing data hiding via class privacy.	The student can apply some object-oriented techniques to write software applications with multiple classes, e.g., enforcing data hiding via class privacy.	The student cannot apply object-oriented techniques to write software applications with multiple classes, e.g., enforcing data hiding via class privacy.
Design and implement object- oriented software for problem solving	strong ability in designing and implementing	<u>The student</u> <u>demonstrates a</u> <u>considerable</u> <u>ability in</u> <u>designing and</u> <u>implementing</u> <u>programs to</u> <u>solve moderately</u> <u>complex</u> <u>problems.</u>	in designing and implementing programs to solve	<u>some ability in</u>	The student does not demonstrate any ability in designing and implementing programs to solve moderately complex problems.
Exception handling	object-oriented programs with complicated exception handling	The student correctly writes object-oriented programs with considerable exception handling facilities.	object-oriented programs with an	The student correctly writes object-oriented programs with some exception handling facilities.	The student cannot write object-oriented programs with any exception handling facilities.

Course Content and CILOs Mapping:

Content		CILO No.
Ι	Object-oriented Programming: Basic Elements	2-6
Π	Object-Oriented Programming: Advanced Concepts	1-2, 5-6
III	Exception Handling, Streams and Files, and Advanced Features	3, 5-6

Course Content:

Topic

- I. Object-oriented Programming: Basic Elements
 - A. Programming methodologies (Design, Flowchart, Pseudo code)
 - B. Lexical elements, data types, operators and expressions
 - C. Control structures
 - D. Classes and objects
 - E. Methods and messages
 - F. Classification, generalization and specialization
 - G. Constructs of an OOP language
 - H. Problem solving

II. Object-Oriented Programming: Advanced Concepts

- A. Inheritance
- B. Interfaces and inner classes
- C. Polymorphism
- D. Modularity

III. Exception Handling, Streams and Files, and Advanced Features

- A. Exception handling
- B. Streams and files
- C. Recursion
