Title (Units):COMP1150 Object Oriented Programming (3,3,2)

Course Aims: To study the object-oriented programming principles and techniques. Upon completion, students should be able to use an object-oriented language to develop rather complex programs.

Prerequisite: COMP 1180 Structured Programming or COMP1170 Introduction to Structured Programming

Learning Outcomes (LOs):

Upon successful completion of this course, students should be able to:

No.	Learning Outcomes (LOs)						
	Knowledge						
1	Describe the principles of object-oriented programming						
2	Apply the concepts of data encapsulation, inheritance, and polymorphism to large-scale software						
3	Acquire the concepts of Graphical User Interfaces						
	Professional Skill						
4	Design and develop object-oriented computer programs						
5	Design and develop programs with Graphical User Interfaces capabilities						
	Transferable Skill						
6	Formulate problems as steps so as to be solved systematically						
	Attitude						
7	Integrate robustness, reusability, and portability into large-scale software development						
8	Develop software with team-work in mind						

Calendar Description: This course introduces the object-oriented programming concepts, principles, and techniques, including classes, objects, inheritance, and polymorphism. All these concepts are illustrated via a contemporary object-oriented programming language.

Assessment:

No.	Assessment Methods	Weighting	Remarks
1	Continuous Assessment	40%	Continuous assessments are designed to measure how well the students have learned the fundamentals and major concepts of object-oriented programming. A number of machine problems will be given to students to train them to design programs via the object-oriented approach. Practical tests will be used to test their programming capabilities.
2	Examination	60%	Final examination questions are designed to see how far students have achieved their intended learning outcomes. Questions will primarily be concepts and skills based to assess the student's ability in object-oriented programming.

Rubrics

Criteria	Excellent (A)	Good (B)	Satisfactory (C)	Marginal Pass (D)	Fail (F)
Principles of	The student	The student	The student	The student is	The student is
object-oriented	acquires excellent	acquires	acquires average	able to describe	unable to describe
programming	knowledge in the	sufficient	knowledge in the	the meanings of	the meanings of data
	principles of	knowledge in the	principles of	data	encapsulation,
	object-oriented	principles of	object-oriented	encapsulation,	inheritance, and
	languages,	object-oriented	languages,	inheritance, and	polymorphism, and
	namely, data	languages,	namely, data	polymorphism,	to give simple
	encapsulation,	namely, data	encapsulation,	and to give simple	examples on them.
	inheritance, and	encapsulation,	inheritance, and	examples on	
	polymorphism.	inheritance, and	polymorphism.	them.	
		polymorphism.			
Applying object-	The student is	The student is	The student is	The student can	The student cannot

oriented techniques to software packages	able to extensively apply object-oriented techniques to	able to sufficiently apply object- oriented	able to apply object-oriented techniques in some key	apply some object-oriented techniques to write software	apply object- oriented techniques to write software applications with
	write software applications with	techniques to write software	elements of software	applications with multiple classes,	multiple classes, e.g., enforcing data
	multiple classes, e.g., enforcing data hiding as	applications with multiple classes, e.g., enforcing	applications with multiple classes, e.g., enforcing	e.g., enforcing data hiding via class privacy.	hiding via class privacy.
	much as possible via class privacy.	data hiding via class privacy.	data hiding via class privacy.		
Graphical user interfaces	The student demonstrates excellent know- how in writing programs with graphical user interfaces.	The student demonstrates considerable know-how in writing programs with graphical user interfaces.	The student demonstrates average know- how in writing programs with graphical user interfaces.	The student demonstrates some know-how in writing programs with graphical user interfaces.	The student does not demonstrate any know-how in writing programs with graphical user interfaces.
Exception handling	The student correctly writes object-oriented programs with complicated exception handling facilities.	The student correctly writes object-oriented programs with considerable exception handling facilities.	The student correctly writes object-oriented programs with an average amount of exception handling facilities.	The student correctly writes object-oriented programs with some exception handling facilities.	The student cannot write object-oriented programs with any exception handling facilities.

Learning Outcomes and Weighting:

Content	LO No.
I. Object-oriented Concepts	1-2, 4-5, 7-8
II. Object-oriented Programming	1-2, 4-5, 7-8
III. GUI Programming	3, 6
IV. Exception Handling, Streams and Files, and Advanced Features	7-8

Course Content in Outline:

<u>Topic</u>

- I. Object-oriented Concepts
- II. Object-Oriented Programming
 - A. Classes and objects
 - B. Methods and messages
 - C. Classification, generalization and specialization
 - D. Inheritance
 - E. Interfaces and inner classes

- F. Polymorphism G. modularity

III.

- GUI Programming A. Graphical user interface B. Event handling
- C. Applets

IV. Others

- A. Exception handlingB. Streams and files
- C. Advanced features
