

**Title (Units):** **GTSU2055 To Fear or Not To Fear: The Coming of AI and What It Means for Our Communities (3,3,0)**

**Course Aims:** The AI revolution has often been compared to the industrial revolution. The industrial revolution dramatically reduced the relevancy of land in the economy, shifted the political power from land-owning aristocrats to industrialists, drove hordes of peasants to the cities, and set the stage for subsequent social and political changes around the world. Will AI similarly dramatically reduce the relevancy of humans in the economy, concentrate power in the hands of those who have access to AI, disrupt the fabric of our political institutions, and threaten the sustainability of our communities?

**Prerequisite:** Nil

**Course Intended Learning Outcomes (CILOs):**

Upon successful completion of this course, students should be able to:

No.	Course Intended Learning Outcomes (CILOs)
	<b>Knowledge</b>
1	Describe the differences between AI and automation and explain concepts and issues related to AI and sustainability.
2	Integrate knowledge in various disciplines (such as political science, economics, computer science, law, and sociology) to identify areas where the arrival of AI would critically affect sustainable community.
	<b>Professional Skill</b>
3	Evaluate the impacts of AI and prepare for the future at the individual level.
4	Apply knowledge from various disciplines to design potential solutions and policy instruments for sustainable community.

**Calendar Description:** The AI revolution has often been compared to the industrial revolution. The industrial revolution dramatically reduced the relevancy of land in the economy, shifted the political power from land-owning aristocrats to industrialists, drove hordes of peasants to the cities, and set the stage for subsequent social and political changes around the world. Will AI similarly dramatically reduce the relevancy of humans in the economy, concentrate power in the hands of those who have access to AI, disrupt the fabric of our political institutions, and threaten the sustainability of our communities?

**Teaching and Learning Activities (TLAs):**

CILOs	Type of TLA
1-4	Lectures Interactive lectures will facilitate students' understanding of various issues related to AI.
1-4	Reflection on media Students will watch videos on how AI affects our communities. Students will evaluate the viewpoints expressed in these videos.
2-4	In-class debate Students will debate on a relevant debate topic after each lecture.
1-4	Group Projects Students will choose from various fantasies of how AI changes the future (such as AI enslaving human beings, AI becoming the president, etc.). They will evaluate the possibility and sustainability of such a story and how we could prepare ourselves for that.

**Assessment:**

No.	Assessment Methods	Weighting	CILOs to be addressed	Description of Assessment Tasks
1	Class Participation	20%	2-4	Students are encouraged to prepare before classes by reading the relevant readings. They will be assessed by how well they manage to raise thought-provoking and meaningful questions during lectures

				and in-class debates. Students are also required to hand in a summary paragraph after their classmates' in-class debates.
2	Class Presentation	15%	1-4	Students will give a class presentation on their group projects. They will be assessed by how well they articulate their ideas and answer questions.
3	Two in-class debates	45%	2-4	Students will form groups, and each group will be assigned two of the weekly debate topics. They will be assessed by how well they work as a team and debate in a civil and reasoned manner.
4	Group Project	20%	1-4	Students will choose an AI-related fantasy mentioned in fictions, movies, etc., and give a critical evaluation of whether the described scenarios are socially, economically, politically, and technologically plausibility. They will be assessed by how well they integrate interdisciplinary knowledge into their analysis, and how well they can suggest ways our communities can prepare for that possible future.

#### Assessment Rubrics:

<b>Excellent (A)</b>	<ul style="list-style-type: none"> <li>• Achieve the first two CILOs, demonstrating a thorough understanding of the concepts of information management technology in business environment.</li> <li>• Demonstrate excellent ability to use IT tools to acquire, communicate and present social and business information via different digital media formats.</li> <li>• Able to well apply Design Thinking to understand and analyse social challenges, and design user-centric solutions using information technology.</li> <li>• Able to well apply information technologies as well as business knowledge to solve social challenges innovatively.</li> </ul>
<b>Good (B)</b>	<ul style="list-style-type: none"> <li>• Achieve the first two CILOs, demonstrating a good understanding of the concepts of information management technology in business environment.</li> <li>• Demonstrate good ability to use IT tools to acquire, communicate and present social and business information via different digital media formats.</li> <li>• Able to apply Design Thinking to understand and analyse social challenges, and design user-centric solutions using information technology.</li> <li>• Able to apply information technologies as well as business knowledge to solve social challenges innovatively.</li> </ul>
<b>Satisfactory (C)</b>	<ul style="list-style-type: none"> <li>• Achieve the first two CILOs, demonstrating a basic level of understanding of the concepts of information management technology in business environment.</li> <li>• Able to use a few IT tools to acquire, communicate and present social and business information via different digital media formats.</li> <li>• Able to apply certain Design Thinking to understand and analyse social challenges, and design user-centric solutions using information technology.</li> </ul>

	<ul style="list-style-type: none"> <li>• Able to apply a few information technologies as well as business knowledge to solve social challenges innovatively.</li> </ul>
<b>Marginal Pass (D)</b>	<ul style="list-style-type: none"> <li>• Achieve the first two CILOs, demonstrating a minimal level of understanding of the concepts of information management technology in business environment.</li> <li>• Able to use basic IT tools to acquire, communicate and present social and business information via different digital media formats.</li> <li>• Able to apply basic Design Thinking to understand and analyse social challenges, and design user-centric solutions using information technology.</li> <li>• Able to apply basic information technologies as well as business knowledge to solve social challenges innovatively.</li> </ul>
<b>Fail (F)</b>	<ul style="list-style-type: none"> <li>• Do not achieve the first two CILOs, and have little understanding of the concepts of information management technology in business environment.</li> <li>• Unable to use basic IT tools to acquire, communicate and present social and business information via different digital media formats.</li> <li>• Unable to apply basic Design Thinking to understand and analyse social challenges, and design user-centric solutions using information technology.</li> <li>• Unable to apply basic information technologies as well as business knowledge to solve social challenges innovatively.</li> </ul>

#### Course Content and CILOs Mapping:

Content		CILO No.
I	Overview: AI and Sustainable Communities	1-4
II	AI and Free Will	1-4
III	AI and the Sustainability of Democracy	1-4
IV	AI and the Sustainability of Civil Liberties	1-4
V	AI and Privacy	1-4
VI	Privacy Protection Around the World	1-4
VII	AI and the Sustainability of Our Job Opportunities	1-4
VIII	AI and Inequality	1-4
IX	AI and Identity	1-4
X	AI and Culture	1-4
XI	Responsible development of AI	1-4
XII	Class Presentations of Group Projects	2-4
