

All accuracy results of 85 datasets are presented in Table 1. We do the Friedman test among all the methods and Wilcoxon-signed rank test between other eight methods and our BSPCOVER. The Friedman test is a non-parametric statistical test, to detect the differences in 85 datasets across all compared methods. Our statistical significance is $p = 0.00$, which is smaller than 0.05. Thus, we reject the null hypothesis, and there is a difference among these methods. We further conduct the Wilcoxon test against all baselines and find out that all results are statistically significant at $p < 0.05$, except **ST** (larger than 0.05) and **COTE** (based on opposite ranks) from the last row in Table 1.

TABLE 1: Accuracy of our method **BSPCOVER** and related methods on UCRARCHIVE
